ProjectWise® 365

BIM collaboration for small to mid-size design teams

ProjectWise 365 is our new offering that is purpose-built for small to mid-size design teams, firms, and projects, enabling faster and higher-quality collaboration with a set of 100% SaaS-based, instant-on services. Enable all practitioners and stakeholders involved in design and engineering to share and find information, conduct collaborative design reviews, and better manage contractual exchanges for maximum team productivity.

Make it simple to deliver projects on time, in budget, and according to specifications by advancing team collaboration throughout the design lifecycle. Find information faster by enabling secure access to information through a centralized, cloud-based repository. Accelerate design reviews by providing real-time feedback directly against 2D designs. Finally, better process contractual exchanges by automating and managing the exchange and review of deliverables. ProjectWise 365 extends the reach, affordability, and accessibility of digital design collaboration so that small to mid-size design firms can consistently deliver their best results.

Find Information Faster

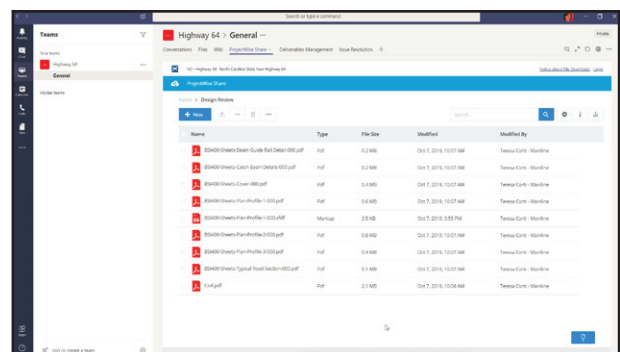

Enable internal and external project participants to securely access information through their web browser or Microsoft Teams environment. Work in a centralized, cloud-based repository to make finding up-to-date information quick and simple, reducing the risk of costly rework and potential project delays.

Accelerate Design Reviews

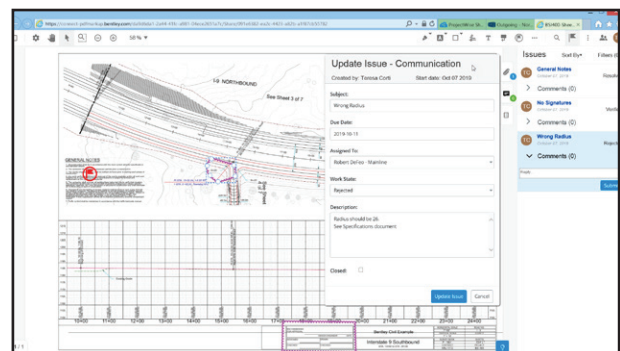

Mark up and flag specific issues directly on 2D designs, with feedback readily referenceable in real-time by all project participants. Improve productivity and reduce mistakes by eliminating the friction of disjointed methods of collaborating on design work.

Better Manage Contractual Exchanges

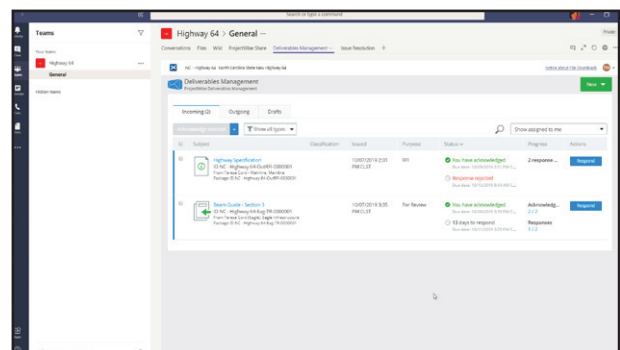

Leverage digital workflows that automate and manage the creation, exchange, and review of contractual deliverables. Avoid wasting time manually assembling and sending packages, and reduce risk by gaining visibility and traceability in deliverables workflows.

ProjectWise 365 At-A-Glance

Find Information Faster

- Maintain a central repository for project information
- Access information from a web browser or Teams environment
- Securely provide access to internal and external participants

Accelerated Design Reviews

- Create markups and comments directly on 2D designs
- Provide real-time feedback referenceable by all project participants
- Flag, track, and resolve issues that arise

Manage Contractual Deliverables

- Automate the creation and exchange of contractual deliverables
- Track and manage the status outstanding deliverables
- Automatically maintain a comprehensive audit trail
